INSTRUCTIONS FOR USE

Prepare equipment: Have the air pump, disposable pipette, tubing, and sachet ready.

Connect tubing to pump: Push one end of the tubing onto the air pump outlet.

Connect tubing to pipette: Push the other end of the tubing onto the thin end of the pipette.

Pour liquid: Pour approximately 50ml of your chosen liquid into a clean glass or beaker (dilute neat alcohol).

Add powder: Open an "Air with Flavour" sachet and pour the powder into the liquid.

Stir well: Stir until the powder fully dissolves in the liquid.

Start the pump & insert the pipette: Turn on the air pump, then insert the pipette into the liquid.

Create foam: Air passes through the pipette's micro-holes to generate airy foam.

Stop pump: Turn off the pump once the foam rises out of the glass.

Serve: Scoop off the airy foam and serve immediately.

Enjoy without swallowing: The soluble foam provides taste stimulation and mouth moistening without needing to swallow.

Re-foam as needed: The remaining liquid can be re-foamed to extend the taste experience.

1. Ensure liquids are particle-free and not thickened.
2. Use a clean glass or beaker for best results.
3. Pour 50 mL of the chosen liquid into the glass.
4. Add sachet contents and stir.
5. Leave to stand for a minute, then stir lightly again.
6. Place the pipette into the silicon tubing, switch on the pump, and gently insert the pipette into the liquid.
7. Continue holding the pipette in the liquid as it foams.
8. Stop the pump and spoon off foam once it reaches the top.
9. Re-foam the liquid as desired.

Note: when foaming alcohol, very sweet and high protein liquids, dilute with water to improve the foaming action. Always use a new pipette to ensure optimal aeration performance.
